

SunSys

SunSys coating products deliver resistance to moisture, oil and grease, heat, friction and industrial chemicals.

Common characteristics of SunSys resistance coatings:

SunSys Resistance	Product Description	Typical Applications
Chemical	Resistance to industrial chemicals.	Salt bags and potassium nitrate
Friction	Controlled slip for processing through packaging lines or rub/scratch resistance.	Bags or boxes on a pallet
Grease/Oil	Prevents penetration of industrial grease and oils.	Motor oil spiral wound container
Heat/Cold	Resistance to extreme temperatures.	Deep freeze packaging or heat sealable packaging eg biscuits, cheese
Lamination replacement	Replacing a plastic layer in a packaging laminate eg going from 2 layers of film to one. Downgauging. Resistant to physical contact.	Horticultural sacks
Product	Resistance to any product containing an ingredient that may affect the packaging/inks.	French fry containers, butter, shampoo, fat from fried chicken buckets, rice and a wide variety of ingredients
Release	Non stick, release (Release lacquer releases from the cold seal to stop blocking in a reel).	Adhesive labels, tapes and coldseal release for chocolate packaging
Water	Resistance to water penetration.	Paper sacks pet food, protection of ink and substrates

SunFuse

SunFuse functional coatings address the need of adhesion applications ranging from priming, heat and cold seal to lamination.

Common characteristics of SunFuse coatings:

SunFuse Adhesion	Product Description	Typical Applications
Coldseal	Cohesive that seals packaging by sticking to itself for heat sensitive applications.	Chocolate bars, ice cream and confectionery
Heatseal	Coating that seals to itself or another substrate when heat is applied.	Yoghurt lids, biscuit wrappers and tobacco outer wrap
Primers	Coatings that are applied to difficult to adhere surfaces such as aluminium to allow further printing or coating.	Confectionery and snacks
Adhesives	Coatings that are applied to one surface of a 2 or more layer structure, and under pressure and curing, laminate surfaces together.	Coffee pack, film beer labels, refrigerated food and cheese
Metallising primers	Allow surfaces of paper or films to accept vacuum metallisation and/or protect metallisation.	Paper beer labels and gift wrap
Extrusion primers	Applied to surfaces to assist with coating a molten plastic film, for lamination structures.	Crisp packs

SunChemical®
a member of the DIC group

Who helps you increase product shelf life, reduce packaging weight and deliver sustainable packaging?

We do.
With innovative functional coatings.

working for you.

SunChemical®
a member of the DIC group

Develop the next generation of sustainable packaging design with Sun Chemical Functional Coatings

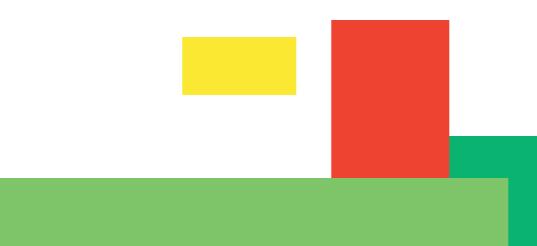

Sun Chemical functional coatings are available under the trade names of SunSys, SunBar®, SunFuse and SunSpec. They serve as ready-to-use performance coatings or building blocks that can be formulated for many performance attributes such as:

- Providing resistance to temperature (hot or cold), chemical, grease, product or water
- Act as barrier to UV light, aroma/odour, oxygen, carbon dioxide, moisture vapour or migration
- Perform as release, lamination replacement or anti-mist agent
- Facilitate adhesion in packaging structures
- Be able to come in direct contact with food.

By bringing together a winning team of knowledgeable people and innovative technologies, Sun Chemical has developed a wide range of functional coating products to help brand owners and packaging convertors actualise next generation of sustainable packaging design.

A winning team of knowledgeable people and innovative technologies.

SunBar

SunBar family of coatings provide a range of barriers against oxygen, CO₂, UV light, odour and migration. In addition, these coatings improve product shelf life, recyclability and product quality. Deploying these coatings for the correct applications can contribute in improving convertor yield. Common characteristics of SunBar barrier coatings:

SunBar Barriers	Product Description	Typical Applications
Moisture Vapour	Stops moisture vapour either escaping from or penetrating a packaged product and shortening shelf life.	Laundry powder, potato crisps and bread
Oxygen	Prevents O ₂ either escaping from or penetrating a packaged product and shortening shelf life.	Fresh meat, poultry and dairy
CO ₂	Prevents CO ₂ either escaping from or penetrating a packaged product and shortening shelf life.	Poultry, milk, cola, beer and carbonated drinks
UV Light	Stops UV light penetrating packaging and affecting the packaged product colour or sensory properties and thereby shortening shelf life.	Processed meat and pizza
Aroma/Odour	Prevents aromas escaping from a packaged product or malodours penetrating packaging maintaining the quality and freshness.	Coffee, wine and toiletries
Migration	Stops migration of chemicals from the environment or packaging into the food, e.g. mineral oil, keeping the food safe to consume.	Rice and pasta packaging

SunSpec

SunSpec coatings are for special applications for example those requiring direct food contact, low odour and anti-mist properties.

Common characteristics of SunSpec coatings:

SunSpec Special Functions	Product Description	Typical Applications
Low odour	For areas where any material in a coating may contaminate a packaged product that is sensitive to absorbing odours or requires low odour.	Chocolate or for pet food where dogs are sensitive to odours
Food contact	Coatings that are in direct contact with food, so inside of a pack.	Sandwich box, a dog food sack, deep freeze pack and confectionery
Laser	Reacts with laser light by changing colour or ablating to produce images or type. Used for bar coding or date codes.	Chocolate, beer labels and folding cartons
Anti-mist	Stops water forming a film on the inside of packaging (through condensation) reducing the transparency of the pack and clarity of the product.	Salad packs, lettuce, fresh and processed meat

Functionalising packaging structures with Sun Chemical coatings

Sun Chemical is more than an ink company; it also offers a wide range of functional coatings for a variety of substrates, applications and printing processes.

Get in touch with your local Sun Chemical representative with proven experience in wide range of applications to discuss your requirements and let us help you deliver next generation of sustainable packaging.

Light Weighting

Oxygen Barrier Coatings could help remove a barrier film or foil together with one layer of adhesive facilitating lighter weight packaging.

Commercial 3-ply laminate

2-ply laminate plus printable barrier coating
